

CARE AND MAINTENANCE OF SUEDE WALLCOVERING

As with any quality product, proper care and maintenance will extend the useful life of your suede effect wallcovering and help maintain its original beauty and finish.

The following general cleaning instructions will serve as a guide to normal cleaning maintenance.

Suede wallcovering should be vacuum cleaned regularly enough to prevent dust and dirt from accumulating, and to maintain the original beauty of the suede effect.

Materials, which could potentially stain the wallcovering, should be removed as quickly as possible to eliminate any possible reaction between the staining agent and the wallcovering. Time is especially important for removing materials containing colours or solvents such as ballpoint pen ink, shampoo, tints and some foodstuffs. If soil remains on the wallcovering too long, permanent discoloration may develop.

HOW TO CLEAN SUEDE WALLCOVERING

CLEANING

- Special technology built in allows for easy care and cleaning.
- Liquid spills tend to “bead up” on the surface and can be easily absorbed with a dry clean cloth.
- Remove dust deposits, prevent soil build-up, and keep the suede surface looking fresh with regular vacuuming with a soft brush attachment.
- Seltex Suede can be cleaned and groomed with a Magik Brush or similar lint removal brush.

WATER SOLUBLE STAINS

- Water soluble stains from tea, coffee, soft drinks, milk and other drinks can be removed by dabbing the affected area with clean water or mild soapy water.
- Blotting is always preferable to rubbing for stain removal.
- Remove any excess soap solution by dabbing with clean water and blotting with a clean cloth.
- Allow the material to dry naturally or dry quickly with a hair dryer using the warm setting.
- “Ring marks” noticed after drying are usually the result of residual soap or cleaning solution remaining on the material and can be removed by cleaning again with water.

Do not use active solvent type cleaning preparations such as nail polish remover, strong alkaline materials, bleaching agents or ammonia.

If any unusual stains or marks are on your wallcovering, consult your supplier for further advice.
